ABSTRACT:

The prosperity of every secondary vocational school and vocational school is primarily based on the demand for their service which also depends on the behaviour of the school in times of crisis. The rapid demographic decline of students entering secondary education nowadays significantly affects operation of all secondary schools in the Czech Republic. Prague secondary vocational schools and vocational schools have to deal with the massive loss of interest in studying these schools. The aim of this master's paper is therefore an effort to characterize the potential impacts of the crisis on these education organizations. At the same times it tries to outline possible activities to reduce the risk of vocational schools in Prague business failure. Each Prague secondary vocational school or vocational school, however, is an organization totally unique, and therefore it must always be based also on the specific conditions applicable to the school.

KEYWORDS:

Secondary vocational schools, vocational schools, reducing the number of students, crisis, risks.
